[View All Credentials](#)

Demonstrate your expertise in Google Analytics. This updated certification validates your ability to move beyond basic setup and unlock actionable insights that drive business growth. Certified users will prove a deep understanding of the Google Analytics data model, how to interpret data across different reporting surfaces, and how to use key measurement features to make smarter, data-driven marketing decisions.

By earning the Google Analytics Certification, Google recognizes your ability to:

- Configure and manage a Google Analytics property, including understanding its event-based data model, user hierarchy, and privacy controls.
- Navigate the core reporting workspaces (Reports, Explore, Advertising) to find and analyze the data that matters most to your business.
- Translate business objectives into measurable actions by setting up key events, conversions, and audiences.
- Derive critical insights from your data by understanding attribution models, data sampling, and how to use explorations to answer complex business questions.
- Activate your data for strategic advantage by using cross-channel insights for budgeting, connecting Google Analytics with other tools like Google Ads, and leveraging first-party data.
